Icon Audio launch world's first KT150 valve amplifiers

In 1958 GEC introduced the KT88 valve, designed specifically as a hi-fi valve and intended to be the best. For 52 years it reigned supreme until Tung Sol released the bigger and better KT120, developed from the same design but with more power to drive more demanding modern loudspeakers.

Now Tung Sol has announced the arrival of the KT150: even bigger with more power, and more refined.

Icon Audio have, for some months, been working to get the best out of this fabulous new tube and have concluded that it is simply astonishing. It can be used in single-ended, ultralinear and triode designs.

With immediate effect the Icon Audio Stereo 60 MkIIIIm integrated amplifier, Stereo 60P MkIIIIm power amplifier, and the MB30SE, MB90 MkIIIm and MB150 monoblocks are available with this very affordable upgrade. The KT150 is also an upgrade for selected previous Icon Audio KT120/KT88 designs.

As a company run by hi-fi enthusiasts, Icon Audio regularly evaluate their amplifiers to ensure that they remain the best of their kind. Any new developments that bring about a significant improvement to sound quality and reliability will be implemented in product upgrades and made available to both new and existing users.

Every Icon Audio amplifier is finished and tested by Icon's team of engineers in Leicester.

UK selling prices (inc. VAT)

| | |
|---|-----------|
| Icon Audio Stereo 60 MkIIIIm / KT150 | £2,599.95 |

About Icon Audio

The Icon Audio philosophy is to create audiophile products that sound good, look good, are easily affordable and will last a lifetime.

Each Icon Audio amplifier is designed in Leicester, UK, by the company's founder, David Shaw. The amplifier chassis are then manufactured in China, with production and quality control being closely managed by David himself who regularly travels to China to ensure that the performance and quality on which Icon Audio have built their reputation are fully maintained. Final product assembly, custom modifications and extensive testing then take place in Icon's premises in Leicester, UK.
