Exposure introduces new flagship 5510 preamplifier

Exposure Electronics' new top-of-range 5510 preamplifier is created for listeners who understand that truly great sound starts with precise signal control.

A dedicated preamplifier allows each part of your system to perform at its best. As the heart of your hi-fi system, it separates signal management from power delivery and shapes, manages and preserves every musical detail before it reaches your power amplifier. The new Exposure 5510 does this with exceptional purity and authority, allowing your system to reveal greater depth, clarity, and emotion. From vinyl and digital sources to treasured recordings rediscovered, it places your music front and centre - exactly as it was meant to be heard.

What sets the 5510 preamplifier apart?

Your music, your way

Flexibility is at the heart of the 5510's design. Six precision line inputs accommodate multiple high-quality analogue sources, allowing effortless switching without compromising signal purity.

Tailored system evolution

A modular design lets you choose an optional MM, MC or DS Audio phonostage, or a plug-in DAC module, ensuring the preamplifier adapts perfectly to your listening preferences, system ambitions and growing music collection across multiple media.

Balanced and unbalanced outputs

Premium XLR and RCA outputs provide maximum connection flexibility while preserving signal integrity across a wide range of power amplifiers.

The power of silence

The 5510's ultra-quiet power architecture ensures a pitch-black sonic background. A custom-wound toroidal transformer with integrated hum shielding delivers an exceptionally low noise floor, allowing music to emerge with natural depth and effortless clarity.

Where precision meets control

A 99-step relay-controlled volume system ensures exact channel matching and smooth, repeatable level adjustment—capturing every nuance at any listening level.

Elegant simplicity

Crafted from solid aluminium, the 5510's resonance-controlled chassis reduces vibration and shields against electromagnetic interference while presenting a clean, timeless aesthetic worthy of any luxury audio system.

The new Exposure 5510 preamplifier delivers refinement, flexibility and control in equal measure. As the centrepiece of a separates system, it reveals more realism, depth and emotion in every recording. Built for the long term, this is the preamplifier your music deserves.

Upgrade options

With these optional modules, your amplifier adapts to you, today and in the future. Tailor your amplifier to your listening style:

- Optional phono boards - ideal for vinyl lovers seeking the perfect match for their turntable:
 - MM (Moving Magnet)
 - MC (Moving Coil)
 - DS (For use with DS Audio optical cartridges)
- Optional DAC board - add a high-quality digital-to-analogue converter and unlock the full potential of digital sources from streamers to CD players and laptops.

Pricing & availability

The Exposure 5510 preamplifier is available now, priced at £3,500 (incl. VAT).

Upgrade options:

- Phono board (MM/MC) £420
- DS Audio phono board £500
- DAC & board (BNC/Optical) £650
