Exposure introduces new DS Audio Phono Board upgrade option

Exposure Electronics' new DS Phono Board is created for listeners who understand that truly exceptional vinyl playback begins with absolute signal precision.

Designed exclusively for use with DS Audio's multi-award winning optical phono cartridges, the DS Phono Board is a specialised interface that unlocks the full performance potential of these exceptionally high-performing cartridges. Acting as the critical link between cartridge and amplification, it accurately powers and processes the optical signal while preserving every subtle musical detail.

What makes it special

All-discrete transistor audio stages

Carefully implemented discrete transistor circuitry delivers exceptional clarity, dynamic expression and tonal richness, avoiding the sonic compromises of integrated solutions.

Pure passive equalisation

Precision passive equalisation preserves phase accuracy and musical integrity, resulting in a naturally fluid and lifelike presentation across the full frequency spectrum.

Low-noise supply regulators for audio stages

Dedicated ultra-quiet regulators ensure an immaculate power environment, reducing noise floor and allowing subtle detail and micro-dynamics to emerge effortlessly.

Low-noise power supply for DS phono cartridge with over-current limiter

A specialised, protected power feed optimises cartridge performance while safeguarding sensitive components, combining absolute sonic purity with long-term reliability.

The DS Phono Board can be used with the following Exposure Electronics amplifiers:

- 3010S2D preamplifier
- 3510 preamplifier
- 5010 preamplifier
- 3010S2D integrated amplifier
- 3510 integrated amplifier
- 5510 preamplifier
- 5510 integrated amplifier.

Pricing & availability

The Exposure DS Phono Board is available now, priced at £500 (incl. VAT).
